PREFACE

This publication was prepared by the Labor Market Information Section of the Colorado Division of Employment and Training, in cooperation with the Employment and Training Administration, U.S. Department of Labor. It is one of several reports published periodically and provides historical, current, and projected labor market information, including the outlook for the Colorado economy, as well as population and labor force estimates, industry and occupational employment outlook, and an analysis of job openings received and services to registered applicants in Colorado Job Service Centers.

It is hoped that this information will be of value to officials and persons with responsibilities for the development and implementation of employment and job-training programs.

Comments, suggestions, and questions regarding content and format are invited and may be addressed to:

COLORADO INDUSTRY EMPLOYMENT OUTLOOK

Fiscal Year 1985* Review

Fiscal year 1985 was a period of significant deceleration in gross national product. GNP grew at an annual rate of 2.0 percent in FY 1985, compared with a rapid 7.6 percent in FY 1984. However, fiscal and monetary policies remained expansionary, with government purchases of goods and services and M2 growing at even faster rates than in fiscal 1984. Approximately 3.3 million non-agricultural wage and salary jobs were created nationally in FY 1985, compared with approximately 4.4 million jobs in FY 1984.

In Colorado, 49300 new covered** jobs were added in fiscal 1985, a growth rate of 3.7 percent. This represented only a slight decline from the 50700 new jobs created in fiscal 1984. A slowing national economy, decreased construction activity, and slower growth or actual declines in the state's basic industries (i.e. mining and manufacturing) characterized the period.

The following section outlines our general assumptions regarding the behavior of certain key macroeconomic variables that will determine in large part the direction of the Colorado economy in the next two to three years.

Fiscal Years 1986 through 1988

The passage of the Gramm-Rudman deficit reduction legislation in December was an historic act, but it remains to be seen whether or not it will have historic consequences. Although spending cuts are limited to $11.7 billion in (federal) fiscal year 1986, current projections of the fiscal year 1987 deficit by the Congressional Budget Office and the Office of Management and Budget indicate that spending cuts of approximately $50 billion will be necessary to meet the $144 billion deficit ceiling for fiscal 1987 that is mandated by Gramm-Rudman. Such massive spending reductions would undoubtedly have a contractive effect unless the action led to significant declines in interest rates and the value of the dollar relative to currencies of our major trading partners. If the decline in these variables led to increases in business investment, consumer spending, and exports that are strong enough to more than offset the loss of the fiscal stimulus, the contractive effect would be avoided.

Of course, the above scenario assumes that domestic goods that are produced for export will meet with strong foreign demand. The coincidence of these factors is not a certainty. A number of our trading partners have used their trade surpluses with the U.S. to stimulate growth and maintain fiscal balance in their own countries. Any action that would tend to erode their favorable trading positions may meet with resistance from foreign governments. Such resistance has already occured in Japan, where in January the central bank governor expressed reluctance to allow the Yen to rise in value any further than it already had in relation to the dollar. However, recent moves toward a more stimulative fiscal policy in Germany, along with increased European buying power resulting from the revaluation of their currencies, should serve to make Europe a more promising market for U.S. exports than it has been for the past several years.

---

* July 1984-June 1985

** See "A Note On the Data" in Appendices

However, the most likely scenario is that the Gramm-Rudman bill will be legislated or adjudicated out of existence before serious action is taken on the fiscal 1987 budget. Congress has balked at making any further cuts in domestic spending beyond a very thin margin. The White House is similarly determined not to allow a reduction in the growth in military spending. The urgent need to take action on the deficit will probably lead to significant action on the revenue side. Therefore, it is likely that Congress will pass, and the White House will approve, some form of tax increase in FY 1987. Spending cuts will probably be made, but the cuts are expected to total no more than half of the estimated $60 billion that would be required by Gramm-Rudman in fiscal years 1986 and 1987.

The most likely form that a tax increase would take would be a per barrel levy on imported oil, and/or an increase in the excise tax on gasoline at the pump. The significant decline in the price of crude oil in early 1986 is likely to translate into significantly lower prices at the pump by late in the year. Thus, the tax that would be least likely to have a contractive effect would be one which would capture a portion of consumer income that they were accustomed to spending in the recent past. An additional advantage of this approach is that the higher price of imported oil resulting from a per barrel levy may rescue some domestic producers from failure, thus preserving a number of jobs.

Although consumer installment debt has reached a historical high relative to personal disposable income (about 19%), a careful look at the situation reveals that this fact is probably not cause for great alarm. The Federal Reserve's measure of consumer installment debt includes the projected total dollar amount of all future interest payments. Thus, if the average maturity of loans increases, it produces a de facto increase in measured debt, even though consumers on average may be left with monthly payments that are quite manageable. The increasing average maturity of loans (especially auto) has been well documented.[1] Further, data from the Federal Reserve suggests that a significant portion of the increase in consumer installment debt in the early 1980's was attributable to higher income groups who are better able to manage debt burden.[2] With the continuing stability of prices and interest rates, and the expectation of moderately growing incomes, it is doubtful that consumers are poised for a major retrenchment for at least a year, although the rate of growth in borrowing will probably decline somewhat. However, the use of credit cards, which has been the fastest growing segment of consumer debt in the last five years, is expected to remain brisk. It has been estimated that approximately half of credit card debt is repaid when it comes due each month. Thus, the average consumer is probably not overburdened with credit card debt.

While the dollar has fallen approximately 30 percent relative to major currencies since February of 1985, the fall has not yet produced an improvement in the trade picture. An increase in exports relative to imports would be expected in the event of a decline in the value of the dollar relative to other major currencies, but the change would occur after a lag period that is somewhat indefinite in length. The lag occurs for several reasons. One is that exporters to the U.S. who may have been enjoying larger than normal profit margins are able to absorb the initial impact of a falling dollar by accepting lower profit margins instead of adjusting prices. Also, trade patterns will not tend to shift until traders are reasonably certain that the change in currency values will be somewhat permanent. An immediate relative shift to exporting by American firms in response to a dollar decline could lead to losses if the dollar subsequently returned to its previous relative position. Currently, there is no compelling reason for currency traders to shift back to dollars, and the dollar's lower position relative to other major currencies is likely to be maintained or to fall still further. It is expected that the relative trade position of the U.S. will begin to show improvement by the beginning of fiscal year 1987, thus improving the employment picture for export related industries.

Business expenditures for new plant and equipment were up 5.6 percent in real terms in calendar 1985, compared with a 15.3 percent rise in calendar 1984. The most recent Bureau of Economic Analysis survey reports that spending will decline by 1 percent in calendar 1986. The generous investment tax credit and accelerated depreciation schedules for new plant and equipment that in large part gave birth to the capital spending boom in 1984 are now threatened by the possibility of tax reform. Uncertainty over the form that a new tax bill will take has led to uncertainty about future rates of return on new investment, especially in capital intensive industries. Plant capacity utilization has remained remarkably stable at about 80 percent for two years; thus, the existing facilities of manufacturers have been adequate to fill existing demand, and there is no pressing need to expand capacity.

On the positive side for investment, the dollar's decline relative to other world currencies should help the competitive position of U.S. firms. The prospect of lower interest rates in Japan and West Germany may allow for more easing of domestic rates. Sharply lower oil prices should help firms contain costs and improve the profit picture for most industries. Inventory investment should pick up early in 1986 as producers attempt to replenish depleted stocks. Viewing the balance of the evidence, gross private domestic investment will probably show a slight increase in 1986.

The growth of M1 (currency held by the public, checkable deposits, and traveler's checks) has been well above the target range that the Fed had set for it in the past year, although growth rates have declined somewhat since mid-1985. A loose monetary policy is generally thought to lead to economic growth, but any sustained growth resulting from the expansionary monetary policy will ultimately depend on the course of money velocity, or the ratio of money stock to income. A falling money velocity would make it necessary to increase the money supply in order to maintain a given level of income. Thus, a money supply that is increasing rapidly would have only a mildly stimulative effect or no stimulative effect at all if money velocity is decreasing. This is precisely the phenomenon that has been occuring for the past year, as the growth of M1 and velocity have been going in opposite directions. It is expected that the Fed will continue on its accomodative money course until there are signs of an upward trend in money velocity and/or inflation.

The rate of increase in consumer prices declined in 1985 from 1984. The small rates of increase in prices in the last several years has been the result of competition and the strong dollar, small wage increases and relatively loose labor markets, and plentiful supplies of basic commodities. As an economic expansion lengthens, prices are usually expected to increase at a more rapid rate, because factories move closer to full capacity, labor markets tighten and wages increase, and shortages appear in basic commodities. Although plant capacity utilization has increased in recent months, there is as yet not enough evidence to suggest a continuing upward trend. The nation's unemployment rate fell in December in the face of strong employment gains, but at slightly less than 7 percent there is still considerable slack in the labor market. The recent drastic decline in oil prices will lead to significant cost savings for the majority of firms. Although the falling dollar is expected to lead to an increase in prices of exported goods, these increases will probably not be felt in large part until late 1986. On balance, it is expected that prices will increase in 1986 only slightly more than in 1985, or about 4 percent.

Given the political and macroeconomic milieu that has been outlined above, approximately 24000 new jobs are expected to be added to the Colorado economy in fiscal year 1986 (July 1985-June 1986), indicating a job growth rate of about 1.7 percent. New jobs are expected to grow at a 2.7 percent rate in fiscal 1987, with about 38000 new jobs being added. An industry specific analysis follows.

The Mining Division

The division as a whole declined by 2.3 percent in fiscal 1985; approximately 800 net jobs were lost in the division during this time period. Metal mining experienced a 3.8 percent decline, while the oil and gas sector fell by 3 percent and the bituminous coal sector grew by 2.1 percent

The metal mining industry has been plagued by competition from foreign mines, many of which have sharply lower operating costs due to higher grade deposits and lower wages. These problems are exasperated by the strong dollar. Manufacturers in recent years have developed techniques that allow them to use lower concentrations of metal in production processes. In many cases products that were previously composed of metal (pipes, for instance) are now fabricated with other materials. The staggering effects of these processes of competition and substitution are expected to continue in the short run. If recent price increases for gold are maintained, the employment situation in that small sector should improve. Although molybdenum mining employment has stabilized over the past two years, stocks of the ore are in excess supply on world markets and further significant additions to employment are unlikely. Metal mining overall is expected to remain stable or decline slightly in the next two years.

The coal mining sector has become increasingly dependent on demand from electric utilities for its output. Increased electricity generation from nuclear plants and increased awareness of energy conservation have reduced the demand for coal in the past decade, while high transportation costs have cut into profit margins. With the prospect of increasing competition in rail transportation and steadily increasing demand for electric power, coal mining is expected to show a very slight increase in employment in the next two years.

Since reaching its peak level of employment in late 1981, oil and gas employment fell by 14.2 percent by mid-1985. The steady decline in oil prices since 1981 has reduced the number of active oil and gas rigs in the state by more than half. In the past two months the disintegration of production quotas set by the OPEC cartel has led to a drastic 60 percent reduction in the per barrel price of crude oil. Although the surviving oil producers in Colorado are operating on a very lean basis, the most recent price decline would be expected to have some impact in the absence of government assistance. However, that assistance is expected to arrive in the form of a federal tax on imported oil to be enacted some time in fiscal year 1987.

The mining division as a whole is expected to experience a 4.3 percent decline in fiscal 1986, followed by stable employment in fiscal 1987 and a 1.2 percent increase in fiscal 1988.

The Construction Division

The construction division added 2500 net new jobs in fiscal 1985, a 3.2 percent increase. A large portion of the increase occured in special trades contract construction sector, which posted a 6.9 percent increase.

During the late 1970's and early 1980's, homebuilders and lenders responded to the high inflation, high interest rate environment by offering flexible financing for home buyers. This strategy was essential to maintaining sales in an economic environment that was prohibitive to home buying. By 1985, in the face of high rates of mortgage delinquency and foreclosure, lenders began to tighten qualifying criterion for home buyers. The tighter rules may herald an important structural change in the housing market, one which only a significant reduction in mortgage rates and/or market prices may counterbalance. Restrictive lending policies may indeed help trigger lower prices for money and housing if loanable funds go wanting. Slower growth in the demand for housing due to slower migration to Colorado could also add to softness in housing prices.

With the opening of 55 new shopping centers in 1985, retail space joined with office space as an oversupplied good in the Denver metro area. Despite fat increases in retail space in 1985, developers are scheduled to add another 6 million square feet of retail space in 1986, with many projects already under construction. Much of the new building is resulting from the optimistic long-term expectations that national retailers hold for retail trade in the metro area. However, vacancy rates for retail space have already reached 35 percent in some areas. It is likely that strong discounting efforts will be undertaken in the next couple of years by retail centers attempting to fill new space. Most areas will probably experience a curtailment in commercial building by fiscal 1988.

Office construction is expected to take place at a much slower rate in fiscal 1986 as the market adjusts to the excess supply that has been reducing effective rents for the past two years. Uncertainty over how real estate will be treated in any new tax legislation is also affecting investor's willingness to undertake new projects. However, the final version of any new tax legislation that is approved will probably not have any severe negative effects on office construction.

With consideration of falling interest rates and projects already scheduled for construction, the construction division is expected to add about 2700 net jobs over the next two years in Colorado, with approximately half of the total increase occuring in Arapahoe, Douglas, Jefferson, and Larimer counties.

The Manufacturing Division

Despite general weakness in the manufacturing division nationally, manufacturing industries in Colorado added 6700 net new jobs in fiscal year 1985, a 3.6 percent increase. Sectors with strong positive growth were electrical and electronic machinery, transportation equipment, printing and publishing, and chemicals and allied industries.

Manufacturing nationwide continued to be battered by import competition in 1985. The dollar's strength relative to other world currencies has made it difficult for manufacturers to penetrate foreign markets. The general sluggishness of most European economies has also dampened demand for U.S. products. Sluggish sales of manufactured goods has squeezed profits, another factor that has produced a drag on capital spending. Many manufacturers have responded by imposing layoffs and other cost-cutting measures with an eye toward lowering their break-even points. Some firms have shifted production to overseas plants where lower labor costs prevail. It has been estimated that about 1.5 million manufacturing jobs have been lost in the U.S. as a result of the dollar's strength.

Many analysts worried that the slowdown in industrial production in early 1985 was a precursor of impending recession, since industrial production as an indicator tends to closely coincide with real (inflation-adjusted) gross national product. Surprisingly, the manufacturing portion of the industrial production index since 1981 has been running above its average performance in the 1970's.[3] A major difference is the performance of the mining portion of the index, which has exhibited sharply negative rates of growth since 1981. Although mining continues to exert a drag on overall industrial production, the index closed out 1985 with strong increases. The jump was partly due to rebuilding of inventories that were running at low levels relative to sales in the second half of 1985.

While many sectors will continue to battle import competition in the coming year, prospects for manufacturing are relatively good. Although only about 7 to 10 percent of all goods manufactured in Colorado are exported to other countries, the dollar has fallen sharply relative to other world currencies in the past year and should lend a boost to both domestic and foreign sales. Rapidly falling oil prices may give impetus to a shift toward larger autos, a sector in which the U.S. holds a competitive advantage. Lower oil prices will also aid manufacturers in their cost containment efforts, thus improving the profit picture. Funds appropriated for defense spending in the last few years have been so generous that the Defense Department has not been able to spend them fast enough; thus, this category of spending will remain strong for at least the next two years regardless of the outcome of Gramm-Rudman, thus boosting the non-electrical machinery, electrical and electronic machinery, and transportation equipment sectors.

The manufacturing division is expected to add about 1900 jobs in fiscal 1986 (a 1 percent growth rate), followed by 3400 net jobs in fiscal 1987 (1.7 percent).

The Transportation, Communications, and Public Utilities Division

This division was one of the strongest performers in fiscal year 1985, adding 3900 net jobs, a 4.1 percent increase. Strong gainers were air transportation (+15.1 percent) and motor freight transportation and warehousing (+3.7 percent).

Deregulation in the late 1970's and early 1980's led to what now appear to be permanent structural changes in the industries within this division. The entry of non-union firms and independents into trucking has led to competition based on expanded distribution networks, expanded services, and lower hauling rates. Although the twin punches of deregulation and recession forced many carriers into bankruptcy, the industry emerged from the 81-82 recession in good health. Expected increases in industrial production and a generally healthy sales environment should lead to increased trucking activity, leading to an increase of about 800 net jobs over the next two years.

Deregulation has transformed the once stodgy airlines industry into one of the most dynamic industry sectors in the U.S. Several significant developments in the past six years has been the rapid rise of regional airlines, a significant growth in air cargo traffic, and a growth in international travel as the dollar's purchasing power in foreign countries soared in the early 80's.[1] Another important development has been the increasing implementation of two-tiered wage scales that have reduced labor costs dramatically. In 1985, discounted fares were the rule, as more than three fourths of airline tickets were sold at a discount. This trend will probably continue for the forseeable future, as airlines continue to add seats even though existing capacity is underutilized. As established major carriers take advantage of lower labor costs and discount carriers undergo the expensive process of expansion, cost differences between carriers will become smaller. Few industry sectors will benefit more from oil price declines than air transportation, as fuel costs comprise 20 percent of operating expenses. Although scattered layoffs will probably occur as competition continues, the air transportation sector is expected to add approximately 800 new jobs in Colorado in the next two years.

The communications sector has also undergone revolutionary change since the AT&T divestiture. All seven of the regional phone companies spun off by AT&T have attempted to diversify into other areas, e.g. computer maintenance, software, and sales of telephone and computer equipment. Competition for large business customers is keen as they provide the most profitable accounts. A key to the regional's strategy has been rate restructuring, one goal of which is to increase phone service rates for residence and small business service, thereby allowing lower rates for large businesses. Lower labor costs have also been a primary goal, and the national work force in telephone communications has fallen by approximately 110,000 in the past two years. As competition, cost containment and productivity increases continue, employment in telephone communications is expected to remain stable or grow very slightly in the next two years.

With moderate increases in population and economic activity and lower fuel costs, the transportation, communications, and public utilities division is expected to add approximately 4000 net jobs over the next two years.

The Trade Division

The division as a whole (combining wholesale and retail) grew by 4.9 percent in fiscal 1985, adding about 16500 net jobs. This growth rate mirrored the 4.9 percent increase in fiscal 1984.

A major development in retailing nationally in the last five years has been the identification of a polarized sales structure. At one level is a rapidly growing core of affluent shoppers with a ready pool of discretionary income. The growth of this cohort explains several somewhat related trends: (1) The proliferation of "designer" labeling; (2) The growth of specialty retailing, both in single mode stores and within larger department stores (3) The increasing tendency of traditional department stores to carry more expensive merchandise that appeals to upscale consumers, while eliminating or reducing departments (e.g. hardware) that carry a lower profit margin.

At the other end of the structure are "discount" retailers such as warehouse buying clubs and "off-price" clothing retailers, many of which attract a broad cross section of shoppers. These merchants are characterized by lower mark-up and no-frills stores and depend on relatively high sales volume for their survival. Lower profit margins in off-price retailing makes customer attraction a high stakes game, as loss of volume can threaten a stores survival. This sector has already witnessed shakeouts in the past year as their market became saturated.

It appears that many sectors of the retail division in the Denver metro area are becoming saturated with stores, especially those appealing to middle and low income shoppers. 55 new shopping centers were opened in 1985, with developers planning even larger additions of retail space in 1986. Although vacancy rates for retail space are only about 9 percent currently, it is likely that this rate will rise significantly in the next two years. Retailers are faced with increasingly thin profit margins and are not likely to add stores at the same pace as they did in the past two years. Much of the growth in retail employment in the next two years will likely come from regional and national retailers who are bullish on the long-term prospects of the front range market.

Expansionary fiscal and monetary policies, stable interest rates, and an environment of stable or declining prices are factors which should make for a reasonably healthy sales environment in the next two years. The level of consumer debt is a concern, but, as explained in the introductory section above, is not cause for great alarm at this point. However, durable goods purchases will not be as strong as in the last two years. Heightened competition and low to moderate sales growth are expected to keep employment growth rates in trade at slightly below their annual average rate over the past five years, or at about 2.6 percent per year.

The Finance, Insurance, and Real Estate Division (FIRE)

In fiscal year 1985, approximately 4500 new jobs were added to the division, representing a 4.9 percent growth rate. Growth rates by major sector were: banking (2.0 percent), credit agencies other than banks (6.1 percent), insurance (-0.7 percent), and real estate (7.4 percent). The annual average growth rate for the FIRE division in the last five years has outpaced all other major divisions, with a 4.4 percent average annual growth rate.

The financial services industry was affected by three concurrent trends in the first half of the 1980's: (1) The lifting of interest rate ceilings on certain types of accounts through deregulation led to increasing competition among financial institutions for deposits. (2) Losses among major banks on international loans and on domestic energy and agricultural loans as commodity prices fell and a disinflationary environment reigned. (3) The growing importance of liquidity as an account feature in the rapidly changing financial environment.

The banking industry responded by pursuing income in the form of higher rates on consumer loans, and by moving toward floating rate financing on mortgages. Services to business customers were also expanded in the form of credit lines, currency brokerage, and increased financial consulting. Several large banks are seeking permission to enter the securities business, an activity that is forbidden to them by the Glass-Steagall Act.

Sluggish business growth in 1985 translated into slack loan demand as existing plant capacity proved adequate to meet demand for products. As regulatory pressure to steer clear of risky borrowers increased, banks were forced to seek other borrowers and increased their holdings of treasury securities and municipal bonds. If banks are forced to increase reserves in order to back loans to potentially risky industries, it may add impetus to cost containment efforts and may lead to employee layoffs over the moderate long-term.

Legislative and regulatory changes in the early 1980's led to a surfeit of real estate investment. A significant portion of the office and commercial building that has taken place in the past three years resulted from a development ethos that emphasized the available supply of capital over the anticipated real demand for office and commercial space. Increases in brokerage and operating functions have led to increased employment in the real estate sector. Despite an oversupply of space in virtually every major area of real estate, developers plan to add more space in 1986.

As employment redundancies are realized and cost containment efforts continue, employment growth rates in the FIRE division in the next two years are expected to be well below their annual average rate of the past five years. The division as a whole is expected to add about 1900 net jobs in fiscal year 1986, followed by 2800 new jobs in fiscal 1987.

The Services Division

The division as a whole added 16600 new jobs in fiscal 1985, a 4.1 percent growth rate. Most of the 15 sectors within the division experienced growth. Some of the strongest gainers were business services (+6600 jobs), amusement and recreation services (+1100), and educational services (including government, +1000 jobs).

Increasing discretionary income, the growing complexity of the business world, and increasing demand for leisure time activities and health care have all been fundamental factors that have led to large increases in service employment in the last ten years. Increased oppurtunities for employment in services and trade has boosted the spending power of young people and added employment to the amusement and recreation, motion picture, and personal service sectors. The increasing tendency to "contract out" various tasks has led to explosive growth in the business services sector. Advances in technology, increased longevity, and growth in the number of third-party payers has led to increased employment in the health services sector. The latter two trends are expected to continue over the long-term as specialization in business services grows and the proportion of the population over age 60 increases relative to other age groups.

Nationally, job growth in the services division (SIC's 70-89) accounted for 40 percent of the total private job growth from 1984 to 1985. In Colorado, 52.6 percent of the net new jobs from the second quarter of 1984 to the second quarter of 1985 were generated in the services division. Part of the difference in the national and state figures is accounted for by the fact that in this specific analysis, much of the government in Colorado is allocated to those private sector industries (e.g., educational services) where comparable activity is taking place. However, these figures should illustrate the importance of the services division to overall job growth in Colorado.

The disproportionate influence of the services division to job growth is expected to continue in the next three years. In fiscal 1986, the division is expected to account for 9400 of the 23800 total net new jobs that are expected to be generated, while in fiscal 1987, approximately 15600 of th 38000 total new jobs are projected to be in services. Sectors that are expected to generate the largest number of jobs in fiscal 1987 are educational services (+4000), business services (+3900), miscellaneous services (+1700), and hotels, motels, and other lodging (+1100).

The Public Administration Division

The division as a whole grew by 2.2 percent in fiscal 1985, adding about 1900 net new jobs. The current limbo status of the Gramm-Rudman deficit reduction legislation will probably force many managers to freeze hiring in the current fiscal year. As explained in the general narrative above, only minor reductions (i.e. less than $30 billion) in federal spending is expected to occur in fiscal 1987, although significant adjustments are expected to be made on the revenue side. On balance the public administration division is expected to add approximately 1000 new jobs in fiscal 1986, followed by 800 jobs in fiscal 1987. Approximately half of the growth will be in the general government and justice, public order, and safety sectors.

THE NATIONAL ECONOMY
WHAT HAPPENED IN 1985 AND WHAT'S AHEAD?

A comparison of economic activity in the nation at year's end reflected the following annual changes:

INDICATOR	1985	1984
GROSS NATIONAL PRODUCT (In 1972 dollars-% change)	2.4%	6.6%
INFLATION (Year to Year Change)		
Consumer Price Index	3.5%	4.3%
Producer Price Index	-0.5%	2.4%
GNP Deflator	3.3%	4.1%
EMPLOYMENT (Annual Average)		
Employed (in thousands)	107150	105005
Unemployed (in thousands)	8312	8539
Unemployment Rate	7.2%	7.5%
INTERNATIONAL		
Mdse Exports (change from year ago)	-1.9%	10.4%
Mdse Imports (change from year ago)	5.2%	25.7%
Mdse Trade Deficit (billions of dollars)	127.4	106.2
Deficit in Current Account (billions of dollars)	114.0	107.4
MISCELLANEOUS		
Savings as a percent of disposable personal income	4.7%	6.5%
Housing starts (in millions)	1.7	1.8
Automobile output (in millions)	8.1	7.6
Raw Steel Output (millions of net tons)	87.2	91.0

The steady if unspectacular economic activity of 1985 will continue into 1986 for at least the first 6-9 months. However, all the concerns about the economy in 1985 are still around in 1986, and these worries will become compounded by a worsening of the fundamentals in the consumer sector. It is probable that a slowdown in the economy will occur in the fourth quarter of 1986, expand into a recession in 1987, and recovery will be slow and moderate during the balance of the 1980's.

Consumer debt is at an all time high. The continued deflationary situation leaves little room for increased profits by manufacturers unless the consistently low productivity improves.

Despite lowered interest rates, capital expansion is lagging partly because industry is waiting to see if tax reform becomes a reality and accelerated depreciation becomes a thing of the past, and partly because consumer debt could finally erupt into a slowdown of consumer purchases.

The import/export imbalance doesn't appear to be subject to improvement during the next twelve months despite the fall in value of the US dollar. The increasing competition from world markets especially third world countries is preventing the US from regaining their share of exports competitively.

Although US car sales increased in 1985 primarily due to accelerated programs of low cost financing and the added restrictions of imports of foreign automobiles, 1986 and 1987 will tell a different story. Restrictions have been lifted, US auto makers have done very little to improve the quality of American made cars, and along with Japan, other countries such as Yugoslavia and Romania are attempting to break into the American market by selling very economical sub compact cars.

The plight of textile and steel manufacturers, that of fierce competition from foreign manufacturers, will be with us during the balance of the 1980's.

The American farmer can continue to look at hard times as traditional big importers such as China and India move toward agricultural self-sufficiency. Additionally, competition from Australia, Canada and Argentina will continue to make inroads into our export business. To counter this competition, the administration will be forced to continue support programs for surplus commodities or resort to programs similar to the 1983 Payment In Kind (PIK) to compensate farmers for non-production. At a time when efforts to reduce the deficit are in place, such programs will only result in increasing federal expenditures and hamper deficit reduction goals.

Sluggish growth in the high technology industries and flat capital spending can be expected in the next 12-18 months. Mergers will continue as in 1985, and those who survive will have to emphasize service, quality and price.

Pharmaceuticals is one industry that may increase its export business due to pending legislation that will legalize exporting drugs still not approved by the FDA to 15 industrialized countries.

The Services industries will continue to grow at a greater rate than manufacturing but the consumer debt situation and events in Washington will influence the rate of growth of this industry.

Hospitals are already feeling the crunch of deficit reduction efforts since Medicare payments have been frozen and further cuts are looming for both Medicare and Medicaid allowances as deficit reduction measures are put in place. The competition from Home Maintenance Organizations (HMO's) and prepaid health programs will further deteriorate hospital growth.

Retailing will also feel the brunt of consumer debt. With savings rates at their lowest in our history, and debt at its highest, consumers are at a position of forced retrenchment. The result will probably show in reduced expenditures for expensive durable goods and some slight increase in expenditures for less expensive nondurable goods.

Major repercussions are still plaguing the deregulated airlines industries. Takeovers, Chapter 11 bankruptcies, discount airfare wars and two-tier wage scales are factors the airlines are confronted with and will continue to deal with for the balance of the 1980's.

Growth in housing could continue to increase due to significant reduction in mortgage interest rates. However, several factors could mitigate the effects of the lowered rates. One is the fact that mortgage holders have raised the downpayment requirements, and are stricter about other debt loads potential buyers are carrying. Second, the overbuilding of rental apartments and condominiums in many parts of the country has created a glut that becomes attractive to the borderline home buyer. Third, the fact that the first home buying population group is shrinking rather than growing as in the 1970's, will mitigate the demand for new single homes. Finally, the dramatic decrease in real estate appreciation during this deflationary cycle is forcing many home owners to remodel and improve current homes rather than sell and move up to more expensive homes.

Banking and Insurance industries will have tough going during the balance of the 1980's. Competition from non bank banks are taking a toll on profits. The chipping away of the Glass Steagall Act of 1933, which bars commercial banks from dealing in corporate securites, is resulting in some banks treating loans like securities and thus are buying and selling and trading their mortgages. This is particularly prevalent with foreign countries. Also, the need to maintain higher loan/loss reserves, cuts into the working and profit margins of most banking institutions. The Insurance business is facing a crisis due to the increase in lawsuits by the public. The high cost of insurance is causing many consumers, both businessmen and professionals, to drop insurance policies.

INDUSTRY TRENDS DURING THE BALANCE OF THE DECADE

Almost nine out of every ten jobs added to the economy during the next decade will be added in a service-producing industry, (transportation, communication, public utilities, trade, finance, insurance, real estate, business, personal and medical services and government). The remainder are projected to be goods-producing jobs (manufacturing, construction, mining and agriculture). However, as stated above, employment growth during the next decade will be moderate as the following chart indicates:

INDUSTRY SECTOR	PROJ. EMPLOY. (000) 1990	AA % CHG 1984-1990
Total	116,865	1.5
Agriculture	3,125	- .7
Nonagriculture	113,701	1.6
Government	16,596	.6
Federal	2,790	- .1
State & Local	13,806	.8
Private	97,105	1.7
Mining	659	.2
Construction	6,189	.7
Manufacturing	20,913	.9
Durable	12,349	1.5
Nondurable	8,041	.0
Transportation, Communications and Public Utilities	5,957	1.3
Trade	27,106	1.8
Finance, Insurance, Real Estate	6,991	1.8
Services	28,142	2.8
Private Households	1,148	-1.3

The most significant changes in distribution of industry sectors has occurred in the Manufacturing, Trade and Services sectors. In 1959 Manufacturing jobs were 25% of total employment, and in 1990 it is expected that the proportion of manufacturing jobs will only be 18%. Employment in trade was at 20% in 1959 and is expected to be at slightly over 23% in 1990, and the greatest change has come about in the Services industries, 14% in 1959 and 24% in 1990.

The following industries are expected to be the fastest growing in the next decade:

INDUSTRY SECTOR	AA % CHGE 1984-1990
Medical services, NEC	4.3
Business services	4.2
Computers & peripheral equipment	3.7
Materials Handling Equipment	3.7
Transportation services	3.5
Professional services, NEC	3.5
Scientific and controlling instruments	2.9
Medical instruments and supplies	2.8
Doctors' and dentists' services	2.6
Plastics products	2.5

The industries that will provide the most jobs during the next decade are listed below:

Business services
Retail trade, except eating and drinking places
Eating and drinking places
Wholesale trade
Medical services, NEC
Professional services, NEC
New construction
Doctors' and dentists' services
Hotels and lodging places
Credit agencies and financial brokers

Those industries which will decline most rapidly during the remainder of the decade are:

Cotton
Wooden containers
Leather products, including footwear
Iron and ferroalloy ores mining
Sugar
Leather tanning and finishing
Railroad transportation
Nonferrous metal ores mining, except copper
Dairy products
Blast furnaces and basic steel products

Employees and employers will be faced with some significant issues in the last half of the decade such as:

- Reduction in wage increases and benefits for both union and non-union employees.
- Promotion of alternative health care programs so that employers can cut health care costs.
- Controversy over testing for drug use, AIDS, honesty etc. Currently, approximately one-fifth of all large businesses use them to screen applicants.
- Continued struggle to implement comparable worth salary structures for traditional female and male oriented occupations.
- Expansion of job sharing, flexitime and computer networking environments in the workaday world.
- Recognition of the fact that the proportion of workers age 35-54 is on the upswing so that laws concerning mandatory retirement and age discrimination will have to be reversed. Legislation concerning vested rights will also have to be addressed so that the older worker will have the option of retiring early, retiring later or retiring with bigger pensions.

NATIONAL OCCUPATIONAL OUTLOOK

Occupational growth trends are expected to depart from the recent past for many broad and detailed occupational groups. Some occupations, especially in the clerical group are expected to slow their rate of growth considerably, while others mainly blue collar occupations that grew in the past, are expected to decline. These changes result from changes in industry growth trends, a projected slowing of total employment growth and from technological changes that affect the occupational structure of industries. The main causes of occupational structure changes are technological change, changes in business practices and methods of operation and product demand changes. The growing use of computer technology is expected to increase the need for systems analysts and computer programmers in nearly all industries and, therefore, these occupations will account for an increasing share of employment. An example of changes due to structure of an industry is the growing tendency of businesses to contract out building cleaning services. This will reduce the proportion of janitors and cleaners on industry employment records but will be offset by significant employment gains in the building cleaning services industry. An example of changes in demand for goods and services provided by an industry level is the educational services industry, which will have an increase in demand for elementary school teachers as the number of elementary school age children rises, but a decline in demand for college teachers as the number of college age students decline. An annual average growth rate of 1.5% is expected during the upcoming decade. The executive, managerial and administrative occupations, professional specialties and technicians and related workers groups are all expected to have growth rates larger than the overall employment growth rate. Despite this projection, growth in these occupations will be slower than they were in the 1973-1984 period.

EMPLOYMENT PROPORTIONS OF MAJOR OCCUPATIONAL GROUPS

OCCUPATION	1984	PROJ. 1995
Executives, Administrators and Managerial Wkrs.	10.6	11.2
Professional Workers	12.0	12.7
Technicians & Related Wkrs.	3.0	3.4
Salesworkers	10.5	10.9
Private Household Workers	.9	.7
Service Wkrs, X Hsehld	14.6	15.4
Precision Workers	11.4	11.1
Operators, Fabricators etc.	16.2	15.2
Farming, Forestry, Fishery	3.3	2.8

The above table affirms the projections of increases in managerial, professional, technical and service oriented workers, both in numbers and in proportions to total employment.

The following chart indicates the projected fastest growing and fastest declining occupations during the period 1984-1995.

FASTEST GROWING OCCUPATIONS	FASTEST DECLINING OCCUPATIONS
Paralegal Personnel	Stenographers
Computer Programmers	Sewing Machine Operators, Shoe
Computer Systems Analysts	Railroad Operators
Medical Assistants	Rail Car Repairers
Data Processing Equipment Repairers	Furnace, Kiln Operators
Electrical & Electronic Engineers	Shoe & Leather Wkrs & Repairers
Elec & Elec Technicians & Technologists	Private Household Workers
Computer Operators, X Peripheral Equip	Telephone Install & Repairers
Travel Agents	Sewing Machine Oper, Garment
Physical Therapists	Textile Machine Operators
Physician Assistants	Mach Mntce Mech, Textiles
Sec. & Fincl. Svcs Salesworkers	Statistical Clerks
Mech Engineering Techs	Ind Truck & Tractor Operators
Lawyers	Central Office Operators
Correction Officers & Jailers	College & Univ Faculty
Accountants & Auditors	Farm & Home Mgmt Advisors

Most analyses of future job opportunities focus on the employment growth in industries and occupations. Because faster growing industries and occupations generally offer better opportunities for advancement, employment growth is an important gauge of job outlook. However, it is not the only one. Another element in the employment outlook is replacement needs. Replacement openings occur as people leave occupations for the following reasons:

- transfer to other occupations as a step up the career ladder or to change careers
- temporarily leaving the labor force to return to school or care for a family
- leaving the labor force permanently due to retirement.

As a consequence, replacement needs are more important than job openings due to growth in an occupation. Estimates for openings due to replacement indicate that they are from 2 to 5 times greater than growth openings in many occupations.

A third consideration in evaluating the data on occupational demand is the availability of workers in various occupations. Very often the supply exceeds the demand despite growth and replacement needs because the supply of workers has been expanding at a faster pace than either.

Another element in analyzing occupational demand is to consider those occupations which will show the largest growth in numbers of jobs. The following table lists those occupations that will generate the most jobs in the economy during the 1984-1995 period:

OCCUPATION	% CHGE 1984-1995	% TOT JOB GROWTH
Cashiers	29.8	3.6
Registered Nurses	32.8	2.8
Janitors & Cleaners	15.1	2.8
Truck Drivers	17.2	2.7
Waiters & Waitresses	26.1	2.7
Wholesale Trade Salesworkers	29.6	2.3
Nursing Aides	28.9	2.2
Salespersons, Retail	12.6	2.2
Accountants & Auditors	34.8	1.9
Teachers, Kindergarten	20.3	1.9
Secretaries	9.6	1.4
Computer Programmers	71.7	1.5
General Office Clerks	9.6	1.4
Food Preparation Workers	22.1	1.4
Fast Food Preparation Workers	17.9	1.3
Computers Systems Analysts	68.7	1.3
Electrical & Electronic Engineers	52.8	1.3
Electrical & Electronic Eng Techs	50.0	1.3
Guards	25.6	1.2
Automotive Mechanics	20.1	1.2
Lawyers	35.5	1.1
Cosmetologists	28.7	.9
Cooks, Restaurant	29.7	.9
Maintenance Repairers, Genl Util	15.6	.9

A comparison of the fastest growing occupations and those that generate the most jobs shows that all the fastest growing jobs require education beyond high school, whereas only one-third of the occupations that produce the most jobs require education beyond the 12th grade. A further observation indicates that those jobs that are not professional primarily fall into the service type occupations. A fact of particular interest is that not one blue collar job (precision workers, assembly and construction workers) appear on either list.

Occupational projections are primarily used by counselors, career analysts, job training program administrators, business developers, students and community agencies, to evaluate choices of careers relative to employment opportunities as well as sources of labor supply.

It is, therefore, important to evaluate those occupations which are projected to grow the fastest in the next decade vis a vis those which are generating the most jobs. Those occupations that will be growing the fastest are falling in the health, personal and business services industries, while those that will employ the most workers are projected to fall in the services industries. The former are primarily professionals and/or paraprofessional occupations which require education beyond high school, reflect salaries above average and generally enjoy low turnover rates, thereby indicating that demand will be more moderate than the latter group of occupations. On the other hand, those occupations falling into the group generating the most jobs, workers are often trained on-the-job, required educational skills are usually at the high school or vocational school level, have a high turnover rate and salaries are at the low end of pay scales. These jobs are particularly good for new entrants to the labor force, those who want part-time employment and those with few skills, but they have little place for training and career development in the long run.

It should be noted that in some few instances, occupations appear on both lists (lawyers, engineering technicians and technologists, computer programmers, accountants and auditors). When making career decisions consideration should be given to those occupations that are projected to grow the fastest and to generate the most jobs as well.

In keeping with the projected slow growth in manufacturing it should be noted that most of the occupations of fastest declining occupations fall into the blue collar categories.

COLORADO OCCUPATIONAL OUTLOOK

For the balance of the decade, industry growth is expected to average approximately 2.6% per annum. Those industries expected to achieve growth rates higher than the average are Trades; Finance, Insurance and Real Estate; and Services which is projected to lead all other industries at approximately 3.6% per annum. Those industries to experience growth rates below the overall average are Agriculture; Government; and Manufacturing. Industry growth rates are closely related to occupational demand and supply, in that the occupations that are heavily represented in those industries with high growth rates are more in demand than those represented in industries that are declining.

The Colorado economy follows the national trends closely in projecting occupational demand. Therefore, in assessing the list of occupations which will generate the most jobs in Colorado (see table below), the greatest proportion of jobs fall into the service oriented occupations: waiter/waitress, cashier, secondary school teacher, maid, and food preparation worker.

OCCUPATIONS GENERATING MOST JOBS IN COLORADO 1985-1990

Waiter/Waitress
Sales Clerk
Sales Representative
Cashier
Janitor/Porter
Accounting Clerk
Mail
Typist
Bookkeeper, Hand
Nurse Aide/Orderly
Stock Clerk, Warehouse
Secretary
General Office Clerk
Kitchen Helper
Food Preparation Worker
Store Manager
Professional Nurse
Truck Driver
Teacher, Secondary School
Supervisor, Blue Collar
Stock Clerk, Sales Floor
Accountant & Auditor
Delivery Route Worker

Very few of the occupations listed above require education beyond the 12th grade, and most of them usually result in on-the-job training. The Colorado economy should enjoy good growth in the health care, retailing, finance and insurance sectors, thereby requiring workers with skills in the fastest growing as well as the largest growing occupations. Those occupations listed in the above table plus some of those listed as fastest growing nationally (computer programmers and systems analysts, data processing equipment repairers, medical and biologic technicians and technologists, to name a few) will be in demand for the balance of the decade, and into the 1990's.

As we approach the 1990's old measurement methods of determining demand and supply in the labor force will undergo some radical changes. Many of the younger more educated workers today already look at their current careers as temporary and that they will have two or three different occupations during their worklife. As we enter the 21st century, the rapidity with which technological and scientific changes occur in various occupations will require workers to continue their education in order to keep up with their jobs or in order to be able to adapt to new skills as old ones become obsolete. Occupational changes, obsolescence, and mobility will make it almost impossible to determine occupational supply in the future, a situation that at best has always been difficult.

ESTIMATED NUMBER OF NET NEW HIRES PER YEAR BY SELECTED INDUSTRY GROUPS
FY 1987*
(Nonfarm W/S Employment)

Major Group	NET NEW HIRES
MINING	
METAL MINING	550
BITUM.COAL & LIG. MINING	2230
OIL & GAS EXTRACTION	4580
NONMETALLIC MINERALS	270
TOTAL MINING INDUSTRY	7630
CONSTRUCTION	
GENERAL CONTRACTORS	11810
HEAVY CONSTRUCTION	7330
SPECIAL TRADE CONTRACTORS	14190
TOTAL CONSTRUCTION INDUSTRY	33330
MANUFACTURING	
FOOD & KINDRED PRODUCTS	3460
APPAREL	360
LUMBER & WOOD PRODUCTS	1360
FURNITURE & FIXTURES	50
PAPER & ALLIED PRODUCTS	20
PRINTING-PUBLISHING & ALLIED	1190
PETROLEUM REFINING & RELATED	50
RUBBER & MISC. PLASTICS	70
LEATHER & LEATHER PRODUCTS	50
STONE-CLAY-GLASS-CONCRETE PROD	750
PRIMARY METALS INDUSTRIES	20
FABRICATED METAL PRODUCTS	600
MACHINERY EXCEPT ELECTRICAL	400
ELECTRICAL & ELECTRONIC MACH.	360
TRANSPORTATION EQUIPMENT	420
INSTRUMENTS & PHOTOGRAPHIC	160
MISC. MANUFACTURING INDUSTRIES	100
TOTAL MANUFACTURING INDUSTRY	9420

Major Group	NET NEW HIRES
TRANSP-COMM & PUB. UTILITIES	
LOC.-SUB. & HWY. PASS. TRANSP.	500
MOTOR FREIGHT TRANSPORT. & WHS	2340
TRANSPORTATION BY AIR	200
TRANSPORTATION SERVICES	240
COMMUNICATION	530
ELECTRIC-GAS-SANITARY SERVICES	1230
TOTAL TRANSP-COMM-PUB UTL IND.	5040
TRADE	
WHOLESALE TRADE-DURABLE GOODS	2640
WHOLESALE TRADE-NON-DUR. GOODS	3770
BLDG. MAT. & MOBILE HOME DLRS.	2420
GENERAL MERCHANDISE STORES	2860
FOOD STORES	8630
AUTO DLRS. & GAS SERV. STATION	7140
APPAREL & ACCES. STORES	1990
FURNITURE & HOME FURNISHINGS	1220
EATING & DRINKING PLACES	38810
MISC. RETAIL	6210
TOTAL TRADE INDUSTRY	75690
FINANCE-INSURANCE & REAL ESTATE	
BANKING	1610
CR. AGEN. OTHER THAN BANKS	470
SEC.-COMMOD. BROKERS	50
INSURANCE	130
INS. AGTS.-BROKERS & SERV.	520
REAL ESTATE	7920
R. EST.-LAW OFFICES	30
HOLDING & OTHER INVEST. OFF.	600
TOTAL FIRE INDUSTRY	11330
SERVICES	
HOTELS-MOTELS-OTHER LODG.	25240
PERSONAL SERVICES	1750
BUSINESS SERVICES	5780

Major Group	NET NEW HIRES
AUTO REPAIR & SERVICES	1620
MISC. REPAIR SERVICES	650
MOTION PICTURES	1060
AMUSEMENT & RECREATION	7860
HEALTH SERVICES	11420
LEGAL SERVICES	1050
EDUCATIONAL SERVICES	9920
SOCIAL SERVICES	3350
MUSEUMS-GALLERIES-GARDENS	10
MEMBERSHIP ORGANIZATIONS	950
PRIVATE HOUSEHOLDS	80
MISC. SERVICES	1910
TOTAL SERVICES INDUSTRY	72650
TOTAL ALL INDUSTRY GROUPS	215090

NOTE: Forecasts are based on ES-202 Series (see appendices).

*Fiscal year begins July 1 of preceding calendar year.

FY 1987*
(Nonfarm W/S Employment)

Major Group	NET NEW HIRES
MINING	
BITUM.COAL & LIG. MINING	10
OIL & GAS EXTRACTION	40
NONMETALLIC MINERALS	60
TOTAL MINING INDUSTRY	110
CONSTRUCTION	
GENERAL CONTRACTORS	1510
HEAVY CONSTRUCTION	1320
SPECIAL TRADE CONTRACTORS	2910
TOTAL CONSTRUCTION INDUSTRY	5740
MANUFACTURING	
FOOD & KINDRED PRODUCTS	660
LUMBER & WOOD PRODUCTS	100
FURNITURE & FIXTURES	10
PRINTING-PUBLISHING & ALLIED	360
CHEMICALS & ALLIED	30
RUBBER & MISC. PLASTICS	10
STONE-CLAY-GLASS-CONCRETE PROD	670
FABRICATED METAL PRODUCTS	190
TOTAL MANUFACTURING INDUSTRY	2030
TRANSP-COMM & PUB. UTILITIES	
LOC.-SUB. & HWY. PASS. TRANSP.	210
MOTOR FREIGHT TRANSPORT. & WHS	650
TRANSPORTATION BY AIR	10
TRANSPORTATION SERVICES	70
COMMUNICATION	180

Major Group	NET NEW HIRES
ELECTRIC-GAS-SANITARY SERVICES	330
TOTAL TRANSP-COMM-PUB UTL IND.	1450
TRADE	
WHOLESALE TRADE-DURABLE GOODS	730
WHOLESALE TRADE-NON-DUR. GOODS	540
BLDG. MAT. & MOBILE HOME DLRS.	580
GENERAL MERCHANDISE STORES	1470
FOOD STORES	2710
AUTO DLRS. & GAS SERV. STATION	1740
APPAREL & ACCES. STORES	590
FURNITURE & HOME FURNISHINGS	420
EATING & DRINKING PLACES	11330
MISC. RETAIL	1410
TOTAL TRADE INDUSTRY	21520
FINANCE-INSURANCE & REAL ESTATE	
BANKING	370
CR. AGEN. OTHER THAN BANKS	360
SEC.-COMMOD. BROKERS	10
INSURANCE	130
INS. AGTS.-BROKERS & SERV.	120
REAL ESTATE	990
COMB. R. EST-INS-LAW	20
TOTAL FIRE INDUSTRY	2000
SERVICES	
HOTELS-MOTELS-OTHER LODG.	1980
PERSONAL SERVICES	630
BUSINESS SERVICES	1770
AUTO REPAIR & SERVICES	570
MISC. REPAIR SERVICES	150
MOTION PICTURES	240
AMUSEMENT & RECREATION	1590
HEALTH SERVICES	5980
LEGAL SERVICES	270
EDUCATIONAL SERVICES	3400
SOCIAL SERVICES	2080
MEMBERSHIP ORGANIZATIONS	370

Major Group	NET NEW HIRES
PRIVATE HOUSEHOLDS	40
MISC. SERVICES	310
TOTAL SERVICES INDUSTRY	19380
TOTAL ALL INDUSTRY GROUPS	52230

NOTE: Forecasts are based on ES-202 Series (see appendices).

*Fiscal year begins July 1 of preceding calendar year.

A NOTE ON THE DATA

The industrial analysis of each Service Delivery Area and the State of Colorado is based on ES-202 data, which is supplied to the Colorado Department of Labor by all employers who are subject to the Colorado Employment Security Act. One of the items available in this data base is the number of employees on employer payrolls. These numbers are arranged by Standard Industrial Classification and geographic area and then aggregated.

With the exception of the table presented on page 55, all employment analyses allocate government to those private sector industries where comparable activity is bein conducted. For example, public sector education is allocated to the major division of Services, and further to the 2-digit SIC sector Educational Services. Public administration employment, since it has no private sector counterpart, was not allocated and is left to stand on its own except on page 55, where it is included in the Government division.

Because most Agricultural, Livestock, and Crop Production employment is not covered by the Colorado Employment Security Act, the ES-202 series cannot reflect this employment. Total agricultural employment is reflected in the Agriculture estimate on page 55.

The Colorado Industry Employment Outlook narrative and the National Outlook narrative were written by different staff economists. Minor differences in opinion, therefore, may be reflected in each of these presentations.

METHODOLOGIES USED TO ESTIMATE YOUTH POPULATION AND LABOR FORCE BY COUNTY - FISCAL YEAR 1986 ANNUAL AVERAGE

I. Population

The 1980 Census gives us the proportion of the total county population that 16-21 year-old persons represented at that time. Population projections of the Census Bureau indicate that between 1980 and 1990, the 15-19 age group's share of the total Colorado population will decline by 2.8 percentage points. The 20-24 age group's share of the state population is also projected to decline by 2.8 percentage points. Therefore, it was assumed that the 16-21 age group's share of the state population will decline by 2.8 percentage points between 1980 and 1990, or .28 percentage points per year. At this rate, the fiscal 1986 youth proportion will be 84 percent of the same proportion in 1980. Thus, each 1980 county youth proportion was multiplied by a factor of .84 to arrive at an estimate of the fiscal 1986 youth proportion.

The ratio arrived at using the above procedure is then multiplied by our estimate of the total county population for fiscal 1986. This calculation yields our age 16-21 population estimate for fiscal 1986.

II. Disadvantaged Youth Population

In this analysis, we define disadvantaged youth as the number of age 16-21 individuals who exist below the federally defined poverty level. The 1980 Census provides us with county estimates of the proportion of the total poverty population that were age 16-21. We need a source to tell us if and by how much this proportion has changed since 1980. We are able to discern this change on a national basis by consulting the annual Census publication: Characteristics of the Population Below the Poverty Level. From this publication we observe that disadvantaged youth represented 9.9 percent of the total disadvantaged population on a national basis in 1980. In 1983, the ratio was back at 9.9 percent after fluctuating somewhat in the interim. Therefore, there was no need to apply any change to 1980 Colorado factors. Our estimate of disadvantaged youth was arrived at by applying 1980 Census proportions of youth disadvantaged to total disadvantaged to our fiscal 1986 estimate of total disadvantaged by county.

III. Labor Force

Base year (i.e., 1980 Census) age 16-21 labor force estimates are available from Report 3 of the EEO special file. A participation rate and an employed/labor force ratio are calculated from the above. Then steps are taken to try to ascertain if and by how much these ratios have changed since 1980. We observe from national data that the youth labor force participation rate in 1984 was approximately 95.6 percent of what it was in 1980. Thus, we apply a factor of .956 to each county labor force participation rate from the 1980 Census.

IV. Employed and Unemployed

We begin by calculating, for each county, the ratio of the age 16-21 employed/labor force to the age 16 and over employed/labor force ratio for the state as a whole (all figures from the 1980 Census). The resulting figure is divided by a similar ratio on a national basis, i.e.:

$$\frac{\text{National 16-21 employed/labor force, 1980}}{\text{National 16 + employed/labor force, 1980}}$$

The resulting figure is multiplied by:

$$\frac{\text{National 16-21 employed/labor force, current}}{\text{National 16 + employed/labor force, current}}$$

The result of this calculation is multiplied by the current estimated Colorado employed to labor force ratio from our "Labor Market Data Summary" table. The result is our current estimate of the age 16-21 employed to labor force ratios by county, which are applied to our estimate of youth labor force to arrive at an estimate of employed youth.

Unemployed is calculated by simply subtracting employed from labor force for each county.

V. Unemployed Disadvantaged Youth

Nationally in 1983, the disadvantaged 16-21 unemployed was 27.8 percent of the total 16-21 unemployed. Secondly, disadvantaged 16-21 individuals comprised 16.9 percent of the total 16-21 population. Dividing the former figure by the latter, we arrive at a factor of 1.64. This factor was used to inflate our county ratios of disadvantaged youth population to total youth population. The resulting adjusted ratio is then applied to the total youth unemployed figure by county to arrive at an unemployed disadvantaged estimate.

ELIGIBLE LABOR SURPLUS AREAS FOR BIDDING ON FEDERAL CONTRACTS

BACKGROUND

Employers located in eligible labor surplus areas, as determined by the Department of Labor, and who meet other criteria, are entitled to preference in bidding on Federal procurement contracts.

The purpose of the labor surplus area procurement preference is to help guide a portion of the government's procurement dollars into those areas where people are in most severe economic need, e.g., areas with the highest unemployment.

The concept of targeting Federal procurement into areas of high unemployment dates back to the early 1950's. There was concern among government officials at the time that high unemployment rates and low utilization of plant and equipment in some areas would lead to erosion of the mobilization base and adversely affect production during the Korean Conflict. There was also concern that the cost of constructing new plants and relocating workers would cause an unnecessary drain on resources.

The Office of Defense Mobilization studied this problem and in February 1952 issued Defense Manpower Policy Number Four (DMP-4), implementing the idea of targeting Federal procurements to labor surplus areas. The program eventually became the responsibility of the Federal Preparedness Agency within the General Services Administration.

The labor surplus area program was largely unsuccessful in producing contract set-asides to employers in such areas because the program lacked a statutory base. This was changed in August 1977 with the enactment of Public Law 95-89 which amended the Small Business Act. Public Law 95-89 authorizes Federal agencies to "set-aside" contracts for competition among firms which agree to perform a substantial portion of the production of the contract in labor surplus areas. Contracts may be set-aside when an agency determines that offers will likely be obtained from a large enough number of eligible firms to permit the awards to be made at reasonable prices.

During the Urban and Regional Policy Group's review of Federal programs in 1977-78, the labor surplus area program was identified as one which had potential for providing relief for distressed areas. In March 1978, the General Services Administration was directed to work with each Federal agency to set targets for labor surplus area contracts, monitor agency performance, and report to the President every six months on the progress of each agency. These principles were contained in Executive Order 12073 which was signed on August 16, 1978.

In addition, Executive Order 12073 assigned to the Department of Labor the responsibility for classifying labor surplus areas. This was a continuation of the Labor Department's responsibilities since the inception of the program under DMP-4 in the early 1950's. The Department also has responsibility for classifying such areas under Executive Order 10582 which implements the Buy American Act.

CLASSIFICATION CRITERIA

Under the Department of Labor's classification procedures, an area is classified as a labor surplus area if the unemployment rate is at least 1.20 times the national unemployment rate during the previous two calendar years.

The procedures also provide for the classification on the basis of exceptional circumstances. Under these procedures, if an area does not meet the criteria necessary for classification as a labor surplus area, the criteria can be waived and the area classified when there has been a sudden rise in the unemployment in the area (other than seasonal or short term) that is not reflected in the area's data for the reference period. Such situations can occur as a result of natural disasters, plant closings of major employers, etc. which have a substantial impact on the area's employment and unemployment. In situations where such exceptional circumstances occur, the area can be classified as a labor surplus area upon petition from the appropriate State employment security agency.

Labor surplus areas are classified on the basis of civil jurisdictions, i.e., counties or county equivalents, as well as all cities with a population of at least 50,000. In four states (Michigan, New Jersey, New York, and Pennsylvania), townships of 50,000 or more population are also eligible for classification as labor surplus areas. In New England, the labor surplus area classifications for Maine, New Hampshire, and Vermont are based on county data while in Connecticut, Massachusetts and Rhode Island, where counties have very limited or no government function, the classifications use towns as county equivalents. By classifying labor surplus areas in this way, i.e., in terms of civil jurisdictions rather than labor market areas, funds can be directed to specific localities with high unemployment rather than to all jurisdictions in a given metropolitan area, not all of which may suffer from the same degree of unemployment.

The eligibility status of labor surplus areas is determined annually under the classification procedures. The annual listings are effective each October 1 and remain in effect for the following 12 months.

The reference period used in making the classifications is an average of the previous two calendar years. By using an average of 24 months of data, contacts can be targeted in areas experiencing high structured unemployment.

The reference period used in preparing the current list of labor surplus areas was January 1983 through December 1984. Because the national unemployment rate was above 8.3 percent, the 1.20 ratio was not used and the "ceiling" concept was used instead in preparing the annual listing. As a result, areas were included on the annual labor surplus area listing if their average unemployment rate during the reference period was 10.0 percent or above.

The new annual listing of labor surplus areas issued by the Department of Labor is effective October 1, 1985. The listing will remain in effect through September 30, 1986.

ELIGIBLE LABOR SURPLUS AREAS	POLITICAL JURISDICTIONS INCLUDED

70 Percent of Lower Living Standard Income Levels[1] for Determination of Economically Disadvantaged Under JTPA 1985

Family Size	Metro[2]	Non-Metro[3]
1	$ 5250[4]	$ 5250[4]
2	7380	7580
3	10140	10410
4	12520	12850
5	14770	15180
6	17280	17730
For each additional family member, add:	2510	2550

[1] Issued by U.S. Department of Labor, Employment and Training Administration

[2] Metropolitan levels apply to residents living within Standard Metropolitan Statistical Areas (SMSA's) as defined by the Office of Management and Budget (OMB) in 1967.

[3] Nonmetropolitan levels apply to places with populations under 50,000 for purposes of these determinations.

[4] In the case of one-person families, the poverty income guideline is higher than the 70 percent LLSIL; therefore, it is listed here.

COMMONLY USED TERMS, ACRONYMS, AND ABBREVIATIONS

AFDC - Aid to Families with Dependent Children

All other nonag - nonagricultural self-employed, unpaid, family, and domestic workers.

Applicants available - all applicants available at end of period plus all new, new partial, and renewal applicants.

BLS - Bureau of Labor Statistics

CDET - Colorado Division of Employment and Training

CETA - Comprehensive Employment and Training Act

Civilian labor force - all civilian uninstitutionalized individuals, 16 years of age or older, employed or unemployed, by place of residence.

Civilian labor force participation rate - the ratio of the civilian labor force to the civilian uninstitutionalized population. Participation rates are usually published by sex-age groups and often are cross-classified by other demographic characteristics.

CPS - Current Population Survey

Continued weeks claimed - the sum of weeks claimed for partial or total unemployment under the unemployment compensation program.

Counseling interview - a face-to-face interview in which an employment counselor or employment counselor trainee (1) helps an applicant resolve problems of occupational choice or change or job adjustment and (2) obtains and records on the application and/or other appropriate applicant records one or more of the following: (a) a summary statement describing the counseling problem; (b) additional information contributing to a better definition of the problem or its solution; (c) a statement of an occupational plan or recommendation for the solution of the problem; and (d) when pertinent, a statement elicited in the course of follow-up concerning progress in carrying out the counseling plan and any further services needed.

Deregistration - denotes that a WIN registrant is being separated from the program for one of the following reasons: (1) employed after registration, off AFDC; (2) employed volunteer, not off AFDC; (3) applicant not eligible for AFDC; (4) applicant exempt from registration for work; (5) applicant sanctioned (removed for refusal to participate in program without good cause); (6) applicant off AFDC for non-WIN-related reasons such as death, moving, etc.

DOL/ETA - Department of Labor, Employment and Training Administration

DOT - Dictionary of Occupational Titles

Eligible Population: those individuals who are eligible for services under the Job Training Partnership Act, i.e., individuals whose income is below the poverty criterion.

Employed: those individuals, 16 years old and over, who did any work at all during the monthly survey week; includes full-time, part-time, and temporary workers. Individuals are also counted as employed if they have jobs but are temporarily absent from work.

Executive Order: a formal document issued by the President of the United States (or in Colorado, the Governor) which has the force of law. Executive Orders are compiled in Title 3 of the Code of Federal Regulations.

Filled opening: a job opening for which an applicant referred by a local Job Service office has been hired by an employer and has entered the job.

HEW: the Department of Health, Education, and Welfare (now split into the Department of Health and Human Services and the Department of Education).

Individuals placed: initial referrals, hirings, and entrance into jobs by applicants during a fiscal year. These activities together comprise "placement transactions".

Initial claim: an application for a determination of eligibility for benefits which certifies the beginning date (or the continuance into a new benefit year) of a period of unemployment.

JTPA: Job Training Partnership Act

Job Development contact: the process of soliciting a public or private employer's order for a special applicant for whom the local office has no suitable opening currently on file.

LMA: Labor Market Area

New Applicant: a person filing an application card (Form 511A) for whom a local Job Service Center has no previously prepared application card or whose previous application has become obsolete.

Nonagricultural (nonag) wage and salary: refers to nonagricultural-established employment.

Not in labor force: includes all civilians 16 years old and over who are not classified as employed or unemployed.

Obtained employment: employment not meeting the definition of "placement" (see below). This term is applied to WIN registrants only.

Placement: the hiring by a public or private employer of an individual referred by the employment office for a job or an interview, provided that the employment office completed all of the following steps: (1) Prepared a job order form prior to referral, except in the case of a job development effort on behalf of a specific applicant; (2) Made prior arrangements with the employer for the referral of an individuals or individuals; (3) Referred an individual who had not been specifically designated by the employer, except for referrals on agricultural job orders for a specific crew leader or worker; (4) Verified from a reliable source, preferably the employer, that the individual had entered the job; and (5) Appropriately recorded the placement.

Referral: the act of determining that an applicant is qualified for a job opening and arranging an interview for the applicant with the employer.

Renewal: the transfer of an applicant from the inactive file to active status; that is, he/she is again considered to be available for referral to job openings or employability-development services.

SIC: Standard Industrial Classification, published by the Office of Management and Budget, 1972.

SMSA: standard metropolitan statistical area

Testing: administering a test (standardized means of measuring an individual's possession of, interest in, or ability to acquire job skills or knowledge) to an applicant.

Unemployed: those individuals 16 years of age or older without a job who are available for work and actively seeking work.

WIN: Work Incentive Program
